

## BSI Training Academy

# ISO/DIS 22000:2017 Food Safety Management Systems Implementing Changes Training Course

### Essential information about the course

The ISO/DIS 22000:2017 was published in April giving food safety professionals and the other interested parties an opportunity to understand the changes being made to this transitioning standard.

If you're already familiar with ISO 22000:2005 and want to find out about ISO/DIS 22000:2017, this comprehensive one-day course will help you understand the differences in implementing the revised standard and discover ways to effectively tackle the transition

After completing this course you will be able to:

- Recognize key differences between ISO 22000:2005 and ISO/DIS 22000:2017 from an implementation perspective

- Communicate process requirements and new documented information requirements
- Use a gap analysis to conduct a baseline review of your current system against the differences identified in the draft international standard
- Implement key differences through examples provided in a toolkit

This ISO/DIS 22000 implementation course is activity-based, so you'll get a deeper understanding of the material and make a greater impact on your organization's transition journey.

Upon successful completion of your course, you'll receive an internationally recognized BSI certificate.
