BSI's Sustainability Solutions

"ESG is no longer just "nice to have", it is intelligent business.

Today, sustainability in the context of business and politics is increasingly often aligned with the SDGs. These goals were presented as the 2030 Agenda for Sustainable Development and was adopted by 193 UN member states at the United Nations Sustainable Development Summit in 2015. The framework consists of the 17 goals.

SDGs represent the Goals, while ESG stands for Methods and Processes. Both SDGs and ESG are concepts for resolving environmental and social issues in order to attain the ideal of a sustainable society.

ESG areas of scope

● **Environmental** e.g. waste management, emissions impact, energy efficiency, air and water pollution, environmental protection, and biodiversity loss and restoration.

● **Social** e.g. human rights, labor rights, working conditions, health and safety, employee relations, employment equity, gender diversity and pay gaps, anti-corruption, and impact on local communities.

● **Governance** e.g. ownership and structural transparency, shareholder rights, board of directors' independence and oversight, diversity, data transparency, business ethics, and compensation fairness.

Standard to demonstrate sustainability goals
- ISO 14001 Environmental Management
- ISO 14064 Carbon Footprint
- ISO 14067 Product Carbon Footprint
- ISO 50001 Energy Management
- PAS 2050 Life Cycle Analysis
- PAS 2060 Carbon Neutrality

Standard to demonstrate sustainability goals
- ISO 20400 Responsible Sourcing
- ISO 45001 Health and Safety
- ISO 26000 Social Responsibility

Standard to demonstrate sustainability goals
- ISO 31000 Risk Management
- ISO 27001 Information Security
- ISO 37001 Anti-Bribery Management System
- ISO 22301 Business Continuity Management

BSI's sustainability solutions including certification, verification and training services:

- ESG verification
- Global Reporting Initiative (GRI) reporting / Sustainability reporting assurance (SRA)
- Carbon footprint ISO 14064
- Product carbon footprint ISO 14067
- Carbon neutrality verification PAS 2060
- Energy management ISO 50001
- Environmental management ISO 14001

- Life cycle analysis PAS 2050
- Health and Safety ISO 45001
- Social responsibility ISO 26000
- Risk management ISO 31000
