TISAX Auditor
International training

Number of days **1**

Key information about the course

Information security is now recognized as an important business process that, if not managed correctly and efficiently, may impact an organization's ability to deliver its products and services to its customers. Just as important, a lack of security has the potential to impact revenues. The highly specialized skills and practical knowledge needed to assess an organization's capability to manage all aspects of information security is one that can be learned.

This innovative, one-day course provides a solid foundation in all aspects of the audit process. Stage by stage, delegates are taken through a structured program that includes a balance of theory and practice. It uses a combination of collaborative learning and practical activities, enabling delegates to gain an understanding of the key activities for auditing.
